Making Electronic Measurements Easy: Smart Tweezers LCR-meter

Share Article

Newly released web site for Smart Tweezers LCR-meter presented by SIBBIS International LLC from Maryland introduces new instructional materials and how-tos for the new model of a popular electronic measurement tool.

POTOMAC, MARYLAND (PRWEB) AUGUST 31, 2012

Newly released web site for Smart Tweezers LCR-meter presented by SIBBIS International LLC from Maryland introduces new instructional materials and how-tos for the new model of a popular electronic measurement tool.

World renowned LCR-meter **Smart Tweezers** manufactured in Canada by **Siborg Systems Inc** is getting more support from SIBBIS International. The unique tiny fully-automatic digital LCR-meter allows to make highly accurate measurements by just touching any electrical component, whether it is inductance (L), capacitance (C) or resistance (R).

Due to its patented mechatronic design, Smart Tweezers has a very low and well defined parasitics allowing to effectively eliminate any offset when measuring resistance or capacitance. This exceptional feature allows to measure very small capacitance and resistance of 1 picofarads and 1 milliohms range.

Unlike its later copies measuring only resistance and capacitance, Smart Tweezers allows to measure inductance of a fraction of microhenry thus making it an indispensable tool for use in radio electronics.

"The new web site will give our clients a better feeling of what this tiny yet powerful device would allow them to do, including a short video introduction," says Anatoly Klimenko, Director of marketing at SIBBIS International LLC. "With a weight of under 2 Oz, this nearly pen-size unit allows 0.2% accurate measurements normally achievable only with much more expensive bench-type LCR meters. It is very important that Smart Tweezers virtually do not require any **Smart Tweezers Manual** reading, it is almost fully automatic and gives you value of a component, whether it is L, C or R immediately when you touch it with the tweezer tips."

SIBBIS International LLC currently offers Introductory **Sale Price for Smart Tweezers™** ST5. Here is a summary of the new model features:

- Automatic LCR, and Equivalent Series Resistance (ESR) measurements
- Basic accuracy of 0.2%
- Li-Ion Battery, USB Charger
- Diode and Continuity test
- Adjustable Test Signal
- Component Sorting with 1%, 5%, 10% and 20% Tolerance
- Semi-automatic Offset Subtraction
- Ideal for small components, as small as 0201 size (about 0.3 mm)
- Displays active and reactive impedance components
- Just 2 Oz weight and ergonomic design
- Long battery life

About SIBBIS International LLC:

Established in 2006, SIBBIS offers international marketing services for high-tech hardware and software product, medical equipment in particular.

For more information: SIBBIS International LLC, 1998 Lancashire Drive, Potomac, MD 20854 USA

Phone/Fax: 301-762-1021, E-mail: [smarttweezers\(at\)sibbis\(dot\)com](mailto:smarttweezers(at)sibbis(dot)com)

About Siborg Systems Inc:

Established in 1994, **Siborg Systems Inc.** is a source of engineering software and hardware tools for semiconductor and electronics industry. Located in the city of Waterloo, Ontario, Canada, it enjoys being part of the local world-renowned high-tech community.
